

ABSTRACT

A method of binding a plurality of sheets into a bound sheet stack. The method

4 includes providing a first sheet and a second sheet. At least one of the sheets has a

5 protective coating applied to at least a portion of the sheet. The first and second sheets

6 are overlaid so that at least a portion of the protective coating on one of the sheets

7 contacts the other sheet. A binding energy is then applied to a binding region on the first

8 and second sheets to thereby bind the sheets into a sheet stack. The binding region

9 includes at least a portion of the protective coating on at least one of the sheets, and

which is in contact with the other sheet.
